

## Application of new CDCB initial fee codes

The [CDCB Fee Schedule](#) describes the new fees. The following points explain how the new fees will be implemented:

1. The fee code provided by the nominator will be compared to the one determined by CDCB from the group name, sex, country code of the ID, requester ID, and fee code for bulls receiving the stud credit. CDCB will use the one it determines. If they are different, nominators will be notified to facilitate notification of customers.
2. If the animal or its dam is in a US herd, but that herd is not enrolled in DHI or a breed classification program, the 8-character group name must start with "USA". The "USA" will result in the US-herd credit. To identify animals in the same herd, the remaining 5 characters can be used within requester for this purpose. Animals from other countries should be identified by their respective ISO standard three-letter country code <sup>1</sup>.
3. The fee code "S" identifies qualification for the stud credit. For these bulls, the group name can contain: a) the DHI herd code of the herd that should receive the evaluations via DRPC or, b) "STUD" in the first 4 positions followed by the stud code in the remaining 4 positions with leading zeros (Example: STUD0001). With option b, evaluations will not be transferred to the DRPC.
4. Fee code "P" indicating submission by an international genotype exchange partner will be determined from breed, sex, country code of ID, and the requester ID at nomination.
5. When an animal (male or female) is from a foreign country and does not qualify for the stud or exchange partner credit, the group name should contain the three-letter country code<sup>1</sup> of the country where the animal is located at the time of nomination. This is particularly valuable where the country code of the ID does not provide this information. HOCAN is allowed to continue to use of this field to contain their unique identifier of the requested genotyping.
6. When
  - a. the provided group name is not found in the CDCB collaborator database; or
  - b. the animal or its dam is not found in the herd declared in the group name provided by the nominator; or
  - c. the group name is USA;The CDCB will search for lactation and type evaluation records for the animal or its dam. If a herd is found, that herd will be used to determine the fee.

### Other changes being implemented

1. There is no longer a higher charge for bulls with genotypes submitted after 15 months of age.
2. Effective August 2019, genomic evaluations of foreign bulls below 16 months of age will be **publically** distributed.

<sup>1</sup> [https://redmine.uscdcb.com/projects/cdcb-customer-service/wiki/CDCB\\_Accepted\\_International\\_IDs](https://redmine.uscdcb.com/projects/cdcb-customer-service/wiki/CDCB_Accepted_International_IDs)

3. Only HOCAN and Semex are authorized to specify fee code “N” to indicate pass-through of genotypes to Canada. CDCB will also apply fee code “N” to genotypes missing a nomination. Fee code “N” genotypes will be processed only to the extent necessary to insure their accuracy for CDCB use and contribution to accuracy of CDCB evaluations.
4. A \$1 service fee will be charged for parentage verification to cover processing costs. Breeds, such as Milking Shorthorn, that are not included in the genomic evaluation will automatically be designated for parentage verification only and charged the fee. Previously there was no charge for genotypes for these breeds.
5. The error code **ORj**, “Genotype nomination herd code is validated”, will be eliminated, relying on code **ORp**, “Herd code not found in Fee Table”, to provide the necessary feedback.
6. The error code **ORn**, “Animal or dam not found in herd”, will return the discovered herd code if one exists.
7. We have requested comment on the proposal that the code **ORk**, “Genotype nomination CDCB fee is validated”, be modified to be “CDCB determined fee is different from submitted fee”. The CDCB determined fee would be provided in the identification number field of the format 1e error segment.
8. The only impact of the new fee schedule on the AI service fee is that there are no longer initial fees that waive the AI service fee. The new AI service fees will apply to those bulls initially nominated on April 3<sup>rd</sup> or later regardless of when they are enrolled in the NAAB Cross Reference Program.

## New fee codes

### Female

Code	Fee amount	Description
1	\$0.00	US birth & yield & health & type records
2	\$1.00	US birth & yield & (health or type records )
3	\$2.00	US birth & yield records
4	\$3.00	US birth & (type or health records) (health records are probably not possible w/o yield records)
5	\$4.00	US birth
6	\$6.00	CAN birth
7	\$8.00	No exemptions
8	\$1.00	Parentage only

**Male**

Code	Fee amount	Description
P	\$0.00	International exchange partner (code P)
S	\$25.00	Controller is a collaborator stud
1	\$25.00	US herd providing yield & health & type
2	\$50.00	US herd providing yield and (health or type)
3	\$75.00	US herd providing yield
4	\$75.00	US herd providing type or health
5	\$100.00	US herd
7	\$200.00	No exemptions
8	\$1.00	Parentage only
